Request for Information on Currently Active Volcanoes in  
Kamchatka (G/I-199)

1. Attached herewith is G/I-199, a listing of volcanoes that are currently active in Kamchatka. The accompanying map indicates the location of each of the volcanoes. The individual volcanoes can be identified by the numbers which are keyed to the typed list.

2. The list has been compiled from a recent Soviet scientific study on this subject and is therefore believed to be reliable and probably complete. The base map, however, is not reliable, either for physical or cultural detail, and should be used only for orientation.
